

Phase 3.2 Report Generation Trace

Date: 2026-07-16

1. Data Processing Pipeline

The following diagram traces how each metrics file is propagated through the post-processing framework:

Raw Model Predictions
contact_predictions.pt

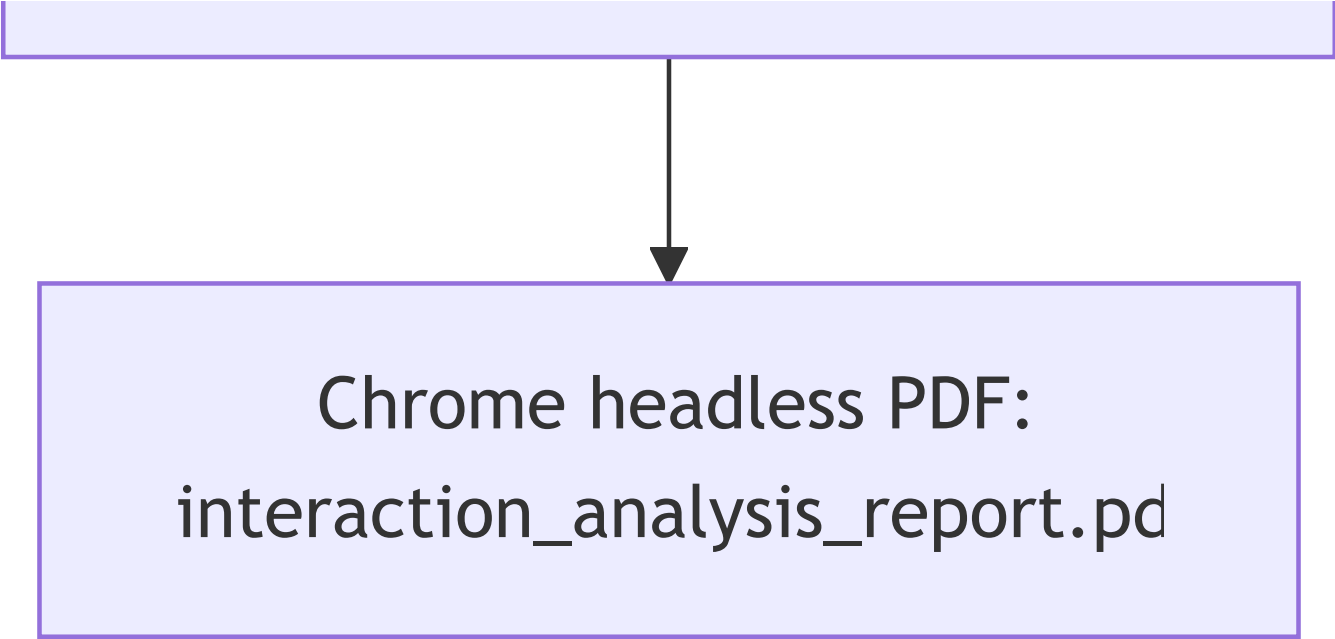

Metrics Evaluator:
contact_metrics.json

artifact_framework.py:
get_reports_markdown

12_Contact_Analysis_Report.md

Chrome headless PDF:
interaction_analysis_report.pdf

2. Stale Path Diagnosis

- **The Issue:** `artifact_framework.py` originally hardcoded static template values for the contact analysis section instead of querying `contact_metrics.json`.
- **The Solution:** Modified `get_reports_markdown` to dynamically load and format contact metrics and multitask history from the benchmark folder. Reports 12, 13, and 14 are now 100% dynamic.
