

Screening Power Suitability Report

Experiment ID: P6-FINAL-VALIDATION-CASF **Date:** 2026-07-18

Screening Power Suitability

- **Evaluation Status: Partially Supported**
- **Justification:** Screening power measures the success rate of identifying active compounds among decoys. LigProtGNN-X can rank candidate structures using affinity predictions. However, without pre-docked conformations for all decoy ligand screens, the screening power is limited by the quality of the decoy poses.
